

Error of normalized energy release rate with respect to BEM results $\Delta \frac{G_I}{G_0} = \frac{G_I}{G_0}|_{FEM} - \frac{G_I}{G_0}|_{BEM}$ as function of crack angular semi-aperture $\Delta\theta$, $VF_f = 7.9 \cdot 10^{-5}$, $\frac{L}{R_f} \sim 100$ calculated with in-house force-based VCCT post-processing routine
